Hello,

I'm an accomplished author and researcher, with a proven track record of delivering high-quality research material for international collaboration.

I have an extensive background in academia, which equips me with a unique perspective to tackle any challenges that might arise, and to think critically about decisions and their likely outcomes. Specifically, my advanced degrees in philosophy and economics affords me research, writing, and communication skills that are matched only with my voracious appetite for learning, which I view as a life-long endeavour.

In addition to my expertise as a researcher, I'm a solidity engineer proficient with both Hardhat and Foundry, and confident in my ability to produce comprehensive testing suites that ensure only safe and reliable code gets deployed. Moreover, I pride myself on being able to work diligently in both a collaborative and independent setting, striving for excellence in everything I do.

Finally, I'm excited to work with new teams in the crypto-asset ecosystem, and to develop my skills and create great outcomes for all involved.

Thank you for your time, and I look forward to chatting with you further.

All the best,
Will
