Hello,

My name is William Ridge, and I'm an accomplished Solidity Engineer with a proven track record of delivering secure and efficient smart contracts.

I'm proficient with both Hardhat and Foundry, and confident in my ability to produce comprehensive testing suites that ensure only safe and reliable code gets deployed. Moreover, I pride myself on being able to work diligently in both a collaborative and independent setting, striving for excellence in everything I do.

In addition to my expertise as a developer, my background in academia equips me with a unique perspective to tackle any challenges that might arise, and to think critically about decisions and their likely outcomes. Specifically, my advanced degrees in philosophy and economics affords me research, writing, and communication skills that are matched only with my voracious appetite for learning, which I view as a life-long endeavour.

Finally, I'm excited to work with new teams in the crypto-asset ecosystem, and to develop my skills and create great outcomes for all involved.

Thank you for your time, and I look forward to chatting with you further.

All the best,
Will
